

Quantum Computing Market Analysis Report

This report provides an analysis of the global quantum computing market, including market size projections and key growth drivers.

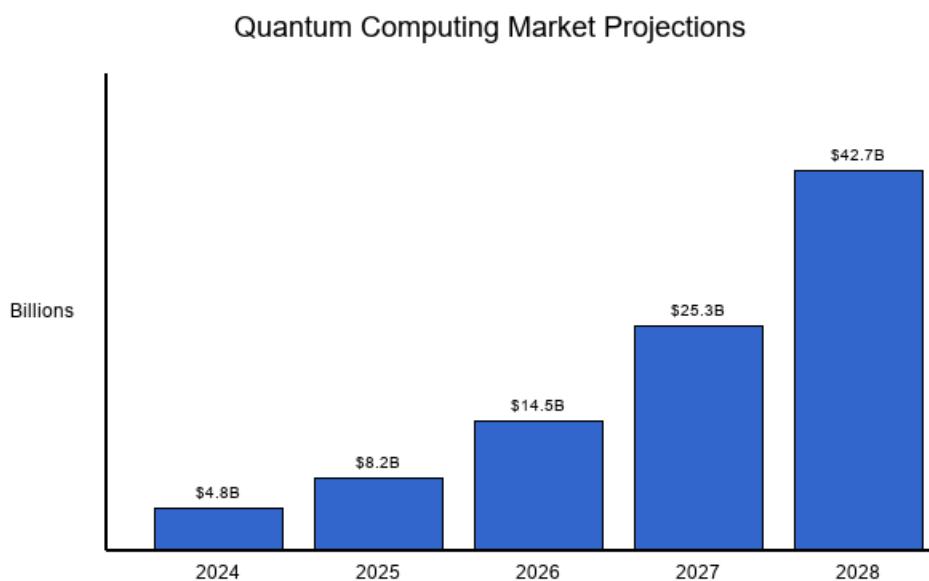

Figure 1: Projected Global Quantum Computing Market Size (2024-2028). The market is expected to grow from \$4.8 billion in 2024 to \$42.7 billion by 2028, representing a compound annual growth rate (CAGR) of 72.3%.

Key Market Drivers

Several factors drive quantum computing adoption:

- Pharmaceutical Research: Drug discovery
- Financial Modeling: Portfolio optimization
- Cryptography: Quantum-resistant protocols
- Supply Chain: Logistics optimization

Investment Outlook

The projected 72.3% CAGR indicates significant growth potential. Companies like IBM, Google, and IonQ lead commercialization efforts.
